

The **Anlas Capra R** is what Anlas refer to as an endure tyre which feature a fully reinforced radial construction. Polyester is also used in the construction of the carcass to ensure optimal performance under heavy loads. The somewhat aggressive tread pattern is similar to that of the Heidenau K76 and Metzeler Tourance, and with the use of silica this tyre gives moderate to good grip on the wet road. This tyre will give mileage in the 15000km range and is ideal for everyday use, hard/loose gravel and moderate sand.
