

**Anlas Capra X.** This tyre manufacturer is new to the adventure motorcycle market. They claim that this tyre was tested for the extremes of Africa. This tyre compares with the likes of Metzeler Karoo 3. The tread pattern is designed & shaped for comfort and maximum grip and performance off-road. This tyre's weak point is its performance on tar where it will definitely give you a few "brown" moments especially on a wet road. However when it comes to mud & sand, it performs like there's no tomorrow and will only be beaten off-road by a "full-on" knobbly tyre. This is not a high mileage tyre so expect to get between 4000 to 6000km on a set.... depending on how heavy the right hand is.
