

Mitas E-08 is everything on tarmac that the E-07 is not. Although not superb, it gives oodles more grip on wet tarmac. The focus with the E-08 is hard/loose gravel, tarmac and little sand. A set of these will last you close to 18 000kms. If you are a Mitas supporter and more than 60% of your riding is done on tarmac I strongly recommend your opt for the E-08 as it is a much safer tyre on the road. This tyre gives high levels of on-road traction and is surprisingly capable when the tarmac turns to dirt.
